Yu's Elite Education

Next week

- ▶ Next week we are going to have two quizzes:
 - ▶ First half: ACSL Programming Contest
 - ▶ Second half: Final quiz for the class
- ▶ Today: review ACSL topics and the class

ACSL

- ▶ ACSL = “American Computer Science League”
- ▶ Runs programming and computer science competitions each year
- ▶ Yu’s is starting to compete next week - you will be the first competitors!
- ▶ Let’s review some things that will be on the ACSL contest:

“What does this program do?”

- ▶ You'll be given a program with a bunch of if statements
- ▶ You will have to keep track of all the variables and what gets printed out at the end
- ▶ Symbols to know:
 - ▶ Relational operators: `<`, `>`, `<=`, `>=`, `==`, `<>`
 - ▶ Logical operators: `and`, `or`
 - ▶ Math operators: `+`, `-`, `*`, `/`, `^`
 - ▶ Functions: `int()` and `print()`
 - ▶ `GOTO`

Program example

a = 4: b = 1: c = 3: d = 1: e = 0

if (a >= e) or (d < b) then a = e else b = d

if (b >= c) and (d <= e) then c = b - c else d = a - e

if b ^ d = 2 then d = d + 1 else b = b + 1

if int(a / c) = a / c then a = a / c else a = a - c

print b + a * e / d

Binary numbers

- ▶ Let's remember:
 - ▶ What are binary numbers?
 - ▶ How can we convert to and from decimal numbers?

Binary numbers

The background of the slide is white with abstract green geometric shapes on the right and bottom edges. These shapes consist of overlapping triangles and polygons in various shades of green, from light to dark, creating a modern, layered effect.

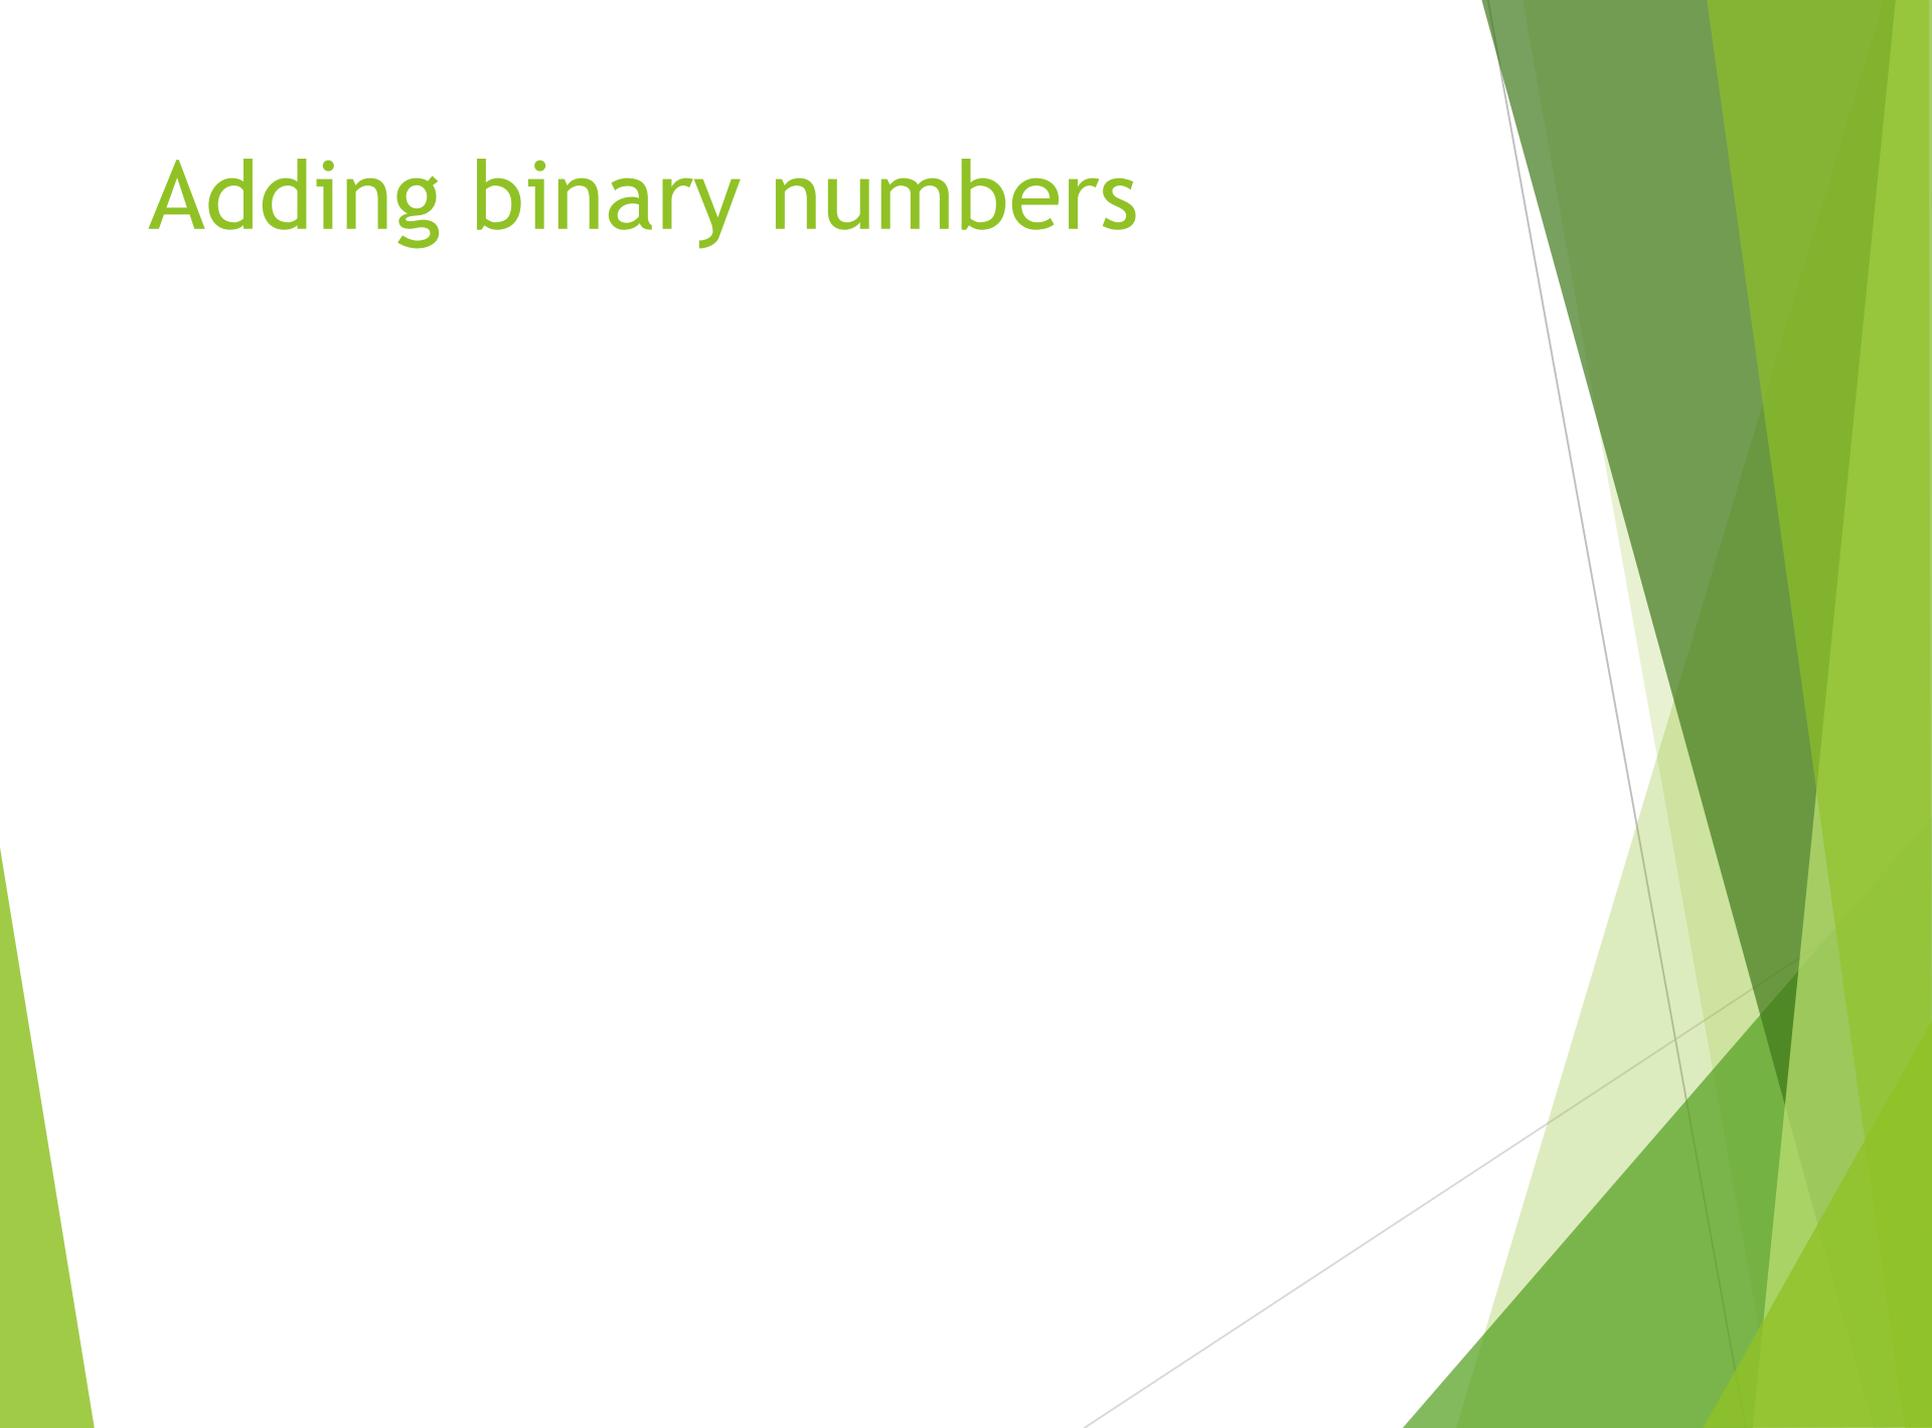

Octal and hexadecimal

- ▶ What are octal and hexadecimal numbers?
- ▶ How can we convert between oct/hex and decimal?
- ▶ How can we convert between binary and oct/hex?

Octal and hexadecimal

Adding binary numbers

Multiplying by powers of 2

Number systems example

- ▶ Convert BED from hexadecimal to octal

Number systems example

Solve for X_2

$$X_2 = A12_{16} - 567_8$$

Functions

- ▶ What is a (math) function?
 - ▶ Takes a number as input, gives a number as output
 - ▶ Might do different things to different numbers

Recursive Functions

- ▶ Recursive function: Defined in terms of itself!

$$f(x) = \begin{cases} f(x-2) + 2 & \text{if } x > 2 \\ x + 2 & \text{otherwise} \end{cases}$$

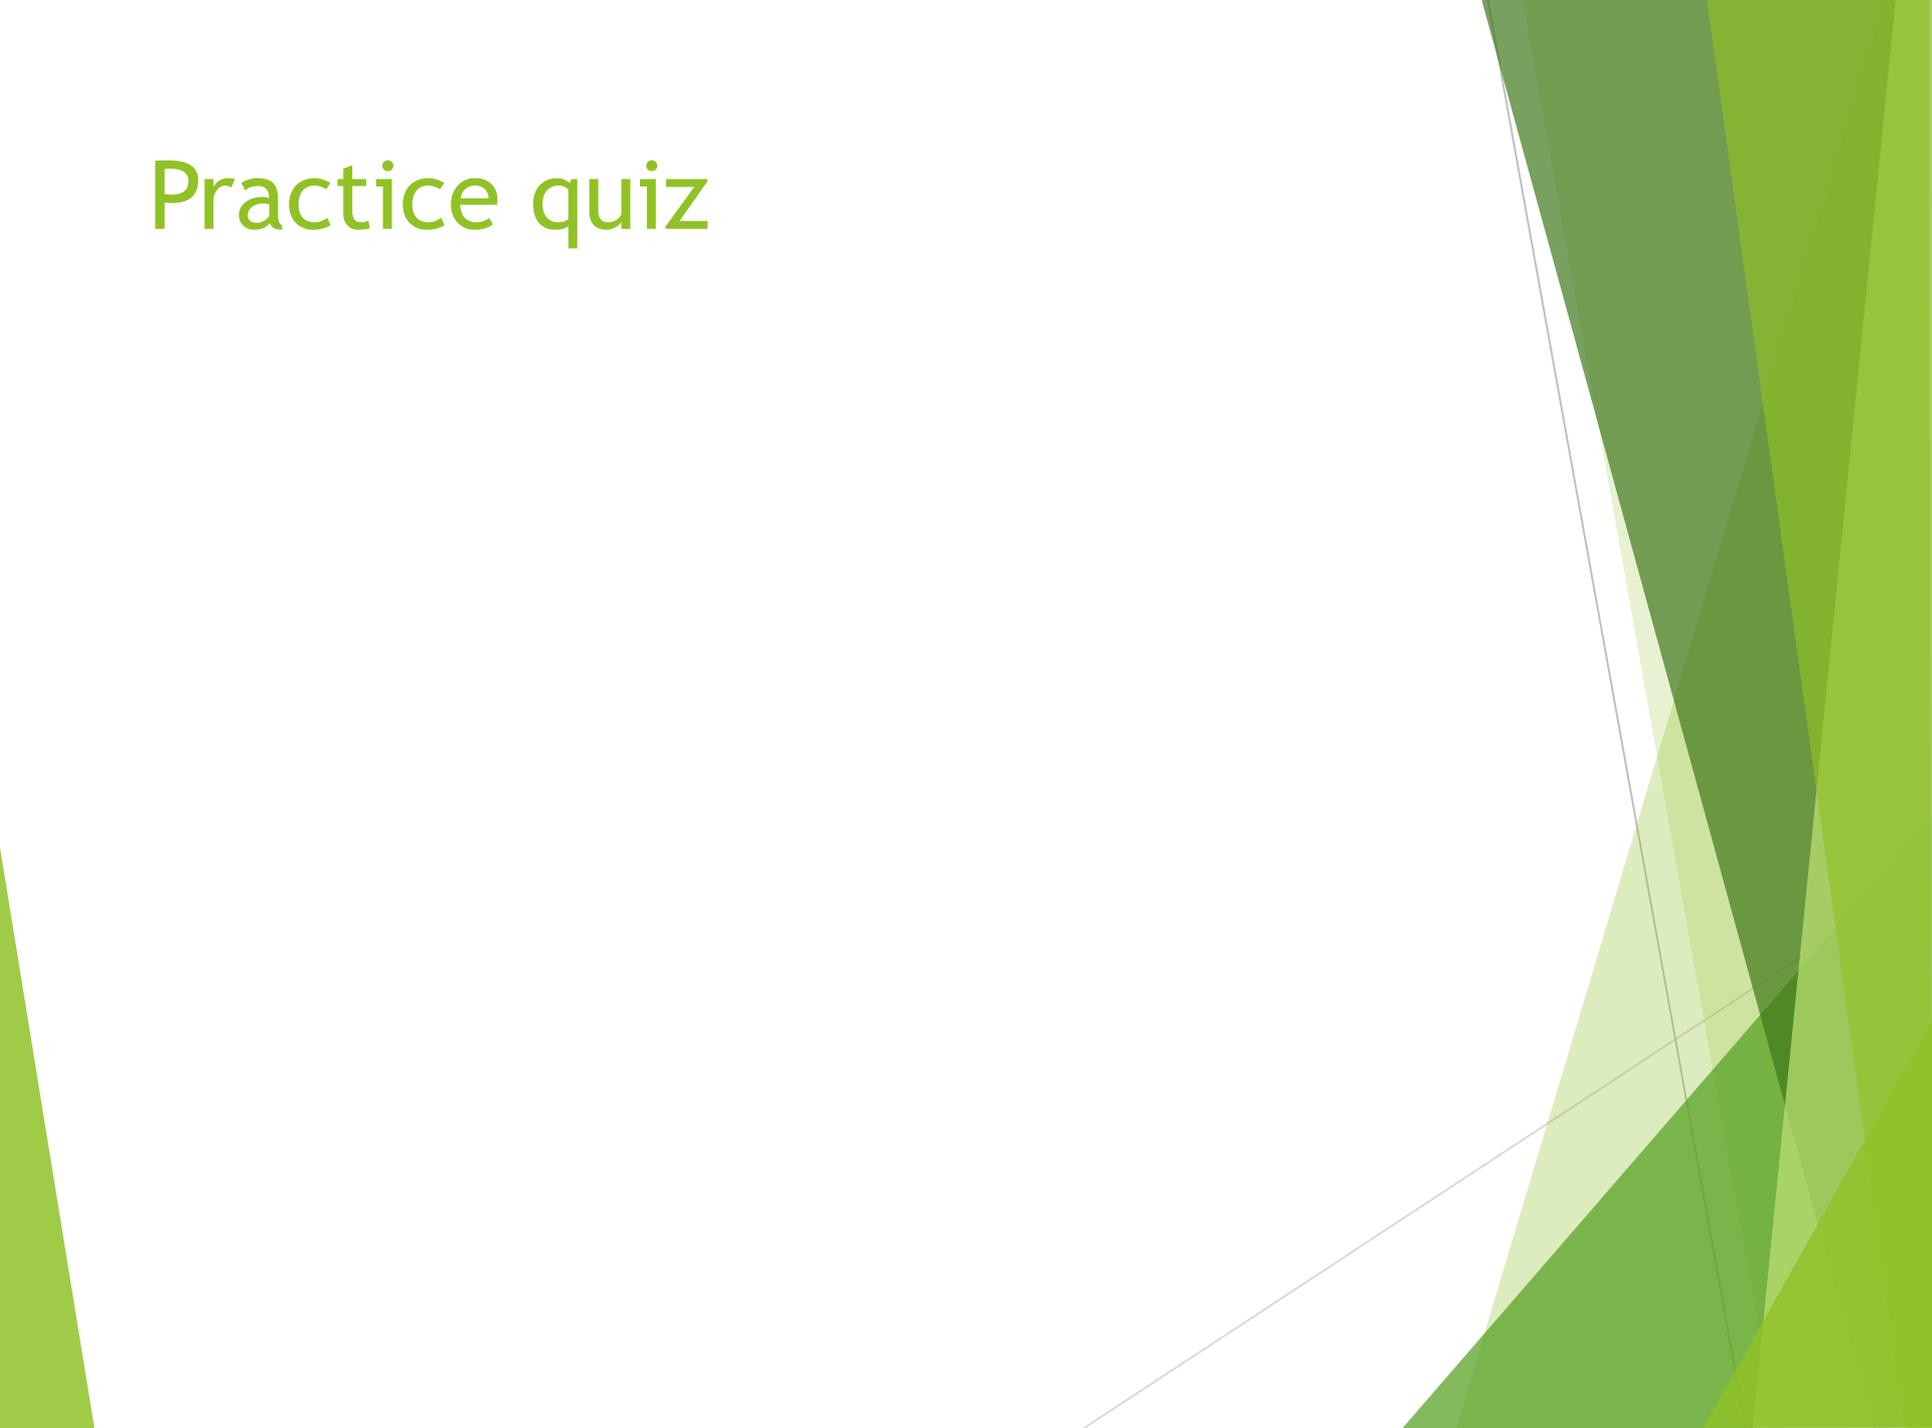

Recursive example

- ▶ $f(x) = \begin{cases} f(x-20) + 10 & \text{if } x > 100 \\ 3x & \text{if } x \leq 100 \end{cases}$
- ▶ $f(150) =$

Recursive example

- ▶ $f(x) = \begin{cases} f(x+4)+2 & \text{if } x < 10 \\ x-8 & \text{else} \end{cases}$
- ▶ $f(f(5)) =$

Practice quiz

The background of the slide is white with abstract green geometric shapes on the right and bottom edges. These shapes consist of overlapping triangles and polygons in various shades of green, from light to dark. A thin, light gray line runs diagonally across the lower right portion of the slide.

Class review

- ▶ How do we store information in programs?
 - ▶ Variables
 - ▶ Creating a variable: `somename = 10`
 - ▶ Types of variables

Class review

- ▶ List variables
 - ▶ Creating and adding to lists
 - ▶ Accessing single elements of lists
 - ▶ Accessing ranges of lists
- ▶ Strings: like read-only lists of characters

Class review

- ▶ If statements
 - ▶ Execute some statements only if a condition is true
 - ▶ Logical operators: not, and, or

Class review

- ▶ Loops
 - ▶ Repeat statements over and over
 - ▶ while loop: repeats until condition is false
 - ▶ for loop: repeats loop for some range of variable values

Class review

- ▶ Random numbers
 - ▶ `random.randint(a,b)`
 - ▶ `random.uniform(a,b)`

Next week

- ▶ Remember, next week (last class) we have two quizzes: ACSL and a final quiz for the class
